Abstract: Standard combustion and formation enthalpies of some new phenylazasidnones compounds are determined. Based on these data, the energetic properties of azasidnone fragment can be determined.

Keywords: combustion and formation enthalpies; interaction energies; azasidnone; nitrophenyl group

DOI: 10.30826/CE18110316

Acknowledgments

This work was supported by the Russian Foundation for Basic Research (grant 16-29-01038 ofi_m) and by the subsidy given to N. N. Semenov Institute of Chemical Physics of the Russian Academy of Sciences to implement the state assignment on the topic 44.8 “Fundamental studies of conversion processes of energetic materials and development of scientific grounds of controlling these processes” (Registration No. 0082-2014-0012) and “Development of synthetic liquid fuels for military aircraft and elaboration of novel technologies for production of the components for special fuels” (Registration No. 0082-2018-0004).
